

The Complete Electronics Lab to Design, Test and Fabricate your Circuits

Tina Design Suite Circuit Design and Simulation Software with PCB Design

TINA Design Suite is a powerful yet affordable circuit simulation and PCB design software package for analyzing, designing, and real time testing of analog, digital, HDL, MCU, and mixed electronic circuits and their PCB layouts. You can also analyze SMPS, RF, Communication, and Optoelectronic Circuits, Generate and debug MCU code using the integrated flowchart tool, and test microcontroller applications in a mixed circuit environment.

Analyze circuit through more than 20 different analysis modes including DC Analysis, AC Analysis, Transient Analysis, Digital step by step analysis, Symbolic Analysis, Network Analysis, Noise Analysis, Tolerance Analysis, Optimization, etc.

It includes multi-layer PCB's with split power plane layers, powerful auto placement and auto routing, rip up and reroute, manual and "follow me" trace placement, pin and gate swapping, 3D view of PCB design from any angle.

More than 20,000 component library

DesignLab Your Indigenous Source and Measure Instrument

Sciencetech DesignLab is a very useful Real-time PC based Instrument for Circuit Designers. It includes a Digital Storage Oscilloscope, Mixed Signal Oscilloscope, Logic Analyzer, Synthesized Function Generator, Pattern / Word Generator, Programmable Clock and Variable Power Supply. You can convert your laptop / desktop into a powerful multi-instrument using DesignLab's interactive software.

DesignLab

Design and fabricate your Printed Circuit Boards with high Accuracy, Speed, and Ease

Features

- Versatile PCB prototyping
- Auto depth adjustment
- Position Selection facility
- Light for work area
- Micro drilling & milling
- Pause/Resume option
- Process Logging
- Design two layer PCB
- Emergency Stop and Play and many more...
