Electronics production to grow 27.6 per cent

India's electronics hardware production in 2011-12 is expected to grow by 27.6 per cent and cross Rs 1553.97 billion (\$33 billion), according to the Economic Survey. The government, in the draft National Policy on Electronics, estimates the electronics system design and manufacturing industry to reach a turnover of \$400 billion by 2020, involving investment of about \$100 billion. This, in turn, will create employment opportunities for 28 million people.

EFY Awards 2011 Announced

Electronics For You presented the eighth edition of EFY Awards in Bengaluru last month. The awards recognise the contribution of leading companies and individuals in the Indian electronics industry. These were presented across 26 categories to brands voted by the readers of Electronics For You and Electronics Bazaar magazines. There were also three special categories, winners for which were selected by a jury of six members.

Delhi government plans two new industrial hubs

The Delhi government plans to start two knowledge-based industrial hubs. These hubs will attract investments worth Rs 700 billion and generate employment opportunities for nearly 300,000 people. The project will cater to specific needs of IT and IT-enabled services industries. The project sites are connected by the Delhi Metro, and will be operational by 2015. The hubs were set up in accordance with Delhi's Industrial Policy for 2010-21.

largest R&D centre outside its US headquarters. Currently, more than 400 employees in Hyderabad report into Xilinx' Programmable Platforms Development (PPD) and Worldwide Technical Support groups.

Infosys to double R&D engineers

Software services firm Infosys plans to double the number of its product research and development (R&D) engineers to 1000 in India in the next two years. The move is part of its goal to get one-third of its revenues from product platforms and solutions. The new product R&D team will work in digital electronics, Internet commerce and healthcare segments.

The product R&D centre will focus on creating intellectual properties around Infosys products and platforms. The company is mulling over some dedicated R&D centres now, which can help it create these kinds of IT solutions.

Bihar government partners Microsoft for futuristic schools

Bihar government is implementing a pilot programme called 'Window to

the World' in partnership with Microsoft India. The tie-up would allow the state government to showcase the model of a school of the future. The initiative would implement programmes expanding the scope of digital literacy and optimising the use of computers by students and teachers. Five government secondary schools will participate in the project.

The pilot programme also aims to provide computer-aided learning opportunities for students of class VIII to XII in government schools. It will introduce innovative platforms to connect students and teachers from all around the world.

The Bihar government aims at projecting the state as the model state for education in India, by providing information and communication technology (ICT) enabled education at the secondary level.

SJCET signs MoU with Yokogawa

St Joseph's College of Engineering and Technology (SJCET), Kerala, has entered into a Memorandum of Understanding (MoU) with Yokogawa India Limited (YIL).

The scope of cooperation under the MoU includes introducing students and faculty to the latest development in the industry, organising joint seminars, creating a platform for the students of the college to undertake project works at the premises of YIL, imparting training to the staff to keep them abreast of the developments in the technical domain area of YIL, and setting up of a centre of excellence for process control equipment with active participation of the company.

INAE workshop on device modeling for microsystems

Recently, the Indian National Academy of Engineering (INAE), in association with the Jaypee Institute of Information Technology (JIIT), NOIDA, and GSA, conducted MOS-AK/GSA India 2012 workshop. The workshop discussed the frontiers of device modeling for microsystems—with emphasis on simulation-aware models.

"The specific goal of the workshop is to classify the most important directions for future development of microelectronic device models. We also intend this to serve as a platform for launch of MOS-AK/GSA India—a forum which will help galvanise the microelectronics modeling community in India," shared Prof. A.B. Bhattacharyya of JIIT, chairman of the International Advisory Committee.

Nokia cutting up to 1000 jobs at Finnish plant

Nokia Corp. has completed negotiations with the staff over job cuts at its Salo plant in Finland. The handset maker will slash 1000 out of 1700 jobs at the cellphone manufacturing plant in Western Europe. The jobs will be cut gradually through 2012, with the lion's share of reductions happening by the end of June. Nokia had announced in February that it would be cutting jobs at smartphone manufacturing plants at Salo, Reynosa, in Mexico and Komárom in Hungary, in order to move device assembly closer to components suppliers in Asia.
