HedgeWars

If you are looking for some fun and a comedy-based action game, look no further than HedgeWars! It is a turn-based strategy game, wherein you command a team of Hedgehog soldiers and wage war against the enemy. The landscape of the game is innovative and diverse, ranging from the depths of so-called Hell to the deepest and farthest points of the universe.

The game has 22 different environments, 47 hilariously funny weapons and 18 game modifiers. You can also customise it to your heart's content—when choosing your army, you are presented with over 120 costumes, 12 forts and over 100 flags. Still need more convincing? When your soldiers die, you can even select the type of grave they are buried in (there are as many as 30 different designs for graves).

The game has turn-based combat support for multi-player mode too, up to a maximum of eight players. It is licensed under the GPL v2, and is also available for BSD and Linux.

0 A.D.

An awesome name, isn't it? 0 A.D. (zero AD) is an Open Source game developed by Wildfire Games. It has a histori-

Fig. 4: FlightGear

cal setting, and the action takes place in western civilisations that rose to power between 500 BC and 500 AD. The game is licensed under GPL, and comes with extensive artwork and sound effects that make history come alive.

As a real-time strategy game, 0 A.D. may not be your cup of tea if you are seeking hack-and-slash arcade gaming. However, if you are fond of strategy games such as Age of Empires, be assured, 0 A.D. will impress you unimaginably! The game has a loyal community, which can be seen in its extremely active and lively forums.

The game comes with OpenGL rendering, and for the most part has been coded in C++, along with a generous use of JavaScript. It is also available for Linux and Mac.

If nothing else, the game will surely enhance your knowledge of history. The game's website features Wikipedia-length articles on ancient and early medieval Europe, as well as the Roman and Persian civilisations.
