

Do-It-Yourself Microcontroller Projects

Here is a collection of websites that are replete with ideas, how-to's, examples and almost everything else that you need to build your own microcontroller-based projects

Electronics For You

Over the last four decades, the EBY Group has become synonymous with information on cutting-edge technology. Today, this renowned media group is spread across eight locations, and caters to the intellectual needs of a diverse readership in India and in some foreign countries. Apart from several other sections, its portal www.electronicsforu.com has a dedicated section on microcontroller projects.

Arduino Play Ground

The Arduino official site has a section where you can find a list of Arduino-based project ideas. Arduino is an Open Source physical computing platform based on a simple microcontroller board. The list is helpful for both the novice and the experienced. The project ideas have been divided into easy, intermediate and advanced categories.

Electro Friends

This is a one-stop educational site for all electronics and computer engineering students. It has a list of microcontroller based and basic electronics projects. The site also includes projects and tutorials for computer engineering students. Electro Friends also allows you to submit your own projects and articles related to electronics and computers. The site does not have any forum but has a community page at facebook.com.

Microcontroller Central

Microcontrollers are everywhere—from light switches and ballast controls to automobiles, robotics and industrial control systems—and available in hundreds of 8-, 16- and 32-bit variants with input/output and peripheral support options that boggle the mind. Microcontroller Central helps you to build a community that is committed to shared success in changing the world bit-by-bit while having fun in the world of MCUs.

Best Microcontroller Projects

If you are looking for microcontroller projects and resources, this is the site for you. Here you have microcontroller tools, projects and tutorials designed by John Main—a professional electronics design engineer based in the UK. Each project includes source code, description and schematics which you can use as a basis for starting your own projects.
