

NEW PRODUCTS

RECENTLY INTRODUCED IN INDIA, FROM NEAR AND FAR

COMPONENTS

Ultra-long-life capacitors

Rubycon India has developed ultra-long-life LLE series miniature aluminium electrolytic capacitors. The capacitors employ high-reliability electrolyte

composition to stabilise the characteristics over time under high temperature condition, and extreme

air-tight sealing rubber material.

The LLE series is said to achieve almost two times the lifetime of conventional long-life capacitors (BXC series). These capacitors are suitable for use as the input capacitor in LED driver circuits.

High-performance IGBTs

Renesas Electronics has announced 13 new products in its seventh-generation insulated gate bipolar transistor (IGBT) lineup with high performance. The new IGBTs include the RJH/RJP65S series for 650V and RJP1CS series for 1250V.

These IGBTs are power semiconductor devices used in systems that convert DC into AC power, and are designed for applications that handle

high voltages and large currents, such as power conditioners (power converters) for solar power generators and industrial motors. The seventh-generation technology, based on enhanced thin-wafer process, sets a low-losses trade-off between conduction, switching losses and robustness capability to withstand short-circuit conditions.

E-compass module

STMicroelectronics has expanded its sensor portfolio with an ultra-compact, high-performance e-compass module. The integration of motion and magnetic sensing in a tiny 3×3×1mm³ package opens new possibilities for advanced navigation and location-based services in ever-sleeker portable consumer devices.

The LSM303D module provides

extremely accurate output across full-scale ranges up to $\pm 16g$ (linear acceleration) and ± 12 Gauss (magnetic

field). The device embeds a temperature sensor and a programmable FIFO (first-in first-out) memory block for advanced motion recognition and smart power management.

500lm/W LED chip

Seoul Semiconductor has introduced an LED product called nPola that can produce five times more light than conventional LED lights. Currently, the brightness of a power chip LED in mass production is around 100 lumens

in warm white, but this new product produces 500 lumens.

Enhanced vertical LED chips

SemiLEDs has launched the Enhanced Vertical (EV) LED product series. These LED chips have a higher thermal endurance, ensuring better reliability at higher temperatures. They employ SemiLEDs' vertical chip structure on a patented metal alloy substrate, offering excellent optical output and high thermal conductivity.

SemiLEDs' EV LED chips are available in blue, green and UV, and sizes of 0.4×0.4 mm² through 1.5×1.5 mm².

TEST & MEASUREMENT

Semiconductor test system

Geotest has expanded the capabilities of the TS-900 PXI semiconductor test system for production testing with the addition of a new manipulator option and automated handler-compatible receiver. The Reid-Ashman OM1069 manipulator allows precise positioning and flexibility for interfacing to automated probers and device handlers used for production testing of semiconductor devices. Its spring-loaded design allows easy alignment and docking to handlers,
