LED LIGHTING

LED spotlighting

Priggen Special Electronic has introduced an LED machine lamp called SpotLED. Having a diameter of 70 mm, the device is designed for permanent installation in drilling, turning, milling

and CNC machines.

There are three beam angles to choose from (16°, 25° and 40°), between very bright spotlight and medium surface illumination. The six high-performance LEDs with light colour temperature of 5500K provide a light flux of 600 lumens.

LED lamps for homes

MITRAMAX has introduced LED lamps for homes in sets of ten (5x5W+5x7W) and 15 (10x5W+5x7W),

priced at Rs 5000 and Rs 7000, respectively. Single 5W lamps are available for Rs 450, while single 7W lamps cost Rs 690.

The MITRAMAX LED lamps have a projected lifespan of 30,000 hours, as against 2000 hours of CFL light and 1000 hours of incandescent bulb.

COMPUTING

Embedded motherboard with ARM processor

Kontron has unveiled its first embedded ARM based motherboard in the Mini-ITX form factor (170x170 mm²). The KTT30/mITX is equipped with NVIDIA's Tegra 3 super processor

and combines high media performance with particularly low power consumption.

With its integrated, ultra-low-power GeForce GPU, the ARM Cortex-A9 900MHz quad-core processor board offers impressive 3D graphic performance at a total energy consumption of just under 7 watts.

STORAGE

SATA 3.0 SSD

Apacer Technology has introduced a SATA 3.0 SSD targeted at cloud-based computing. The SAFD 25A features outstanding efficiency and a large storage capacity of 512 GB. It aims to optimise data storage variables in cloud computing centres by providing speed

within a stable and power-saving operating environment.

The SSD adopts the SATA 3.0 interface, achieving twice the processing capacity of preceding SATA II interfaces. It is said to offer a maximum sequential speed of 475/360 MB/s and input/output operations per second of up to 50,000, making it as efficient as a RAID array consisting of 50-60 mechanical hard drives.

MISCELLANEOUS

Remotely operated vehicle

NEX Robotics has introduced a high-performance remotely operated vehicle (ROV) called Dominator II. It is powered by compact twin drive trains with peak output of 2 HP and offers top speed of 15 kmph. It can carry 60 kg of additional mission-specific payload in its modular cargo bays.

The ROV has modular architecture

with weapon mounts for light machinegun, grenade launcher, six-axis robotic arm for improvised explosive device disposal and multi-spectrum camera pod with zoom up to 60x.

It is also equipped with GPS, environmental and other tactical sensor packs suitable for different types of mission profiles.
