

Soar to new heights of single-motor control with extreme 32-bit RX63T MCUs

The RX63T Group of high-performance microcontrollers with a maximum operating frequency of 100MHz are designed for motor control. The RX63T is suitable for single-motor control of consumer electronics devices such as washing machines and refrigerators and for single-motor control/small-motor control of industrial equipment.

Booth No 2310, Hall 2

Advanced Features

■ Functions for facilitating motor control

- multifunction timers (MTU, GPT)
- high-speed 12-bit A/D converter

■ Variants of lower memory and lower pin-count package

- 8 Kbyte E2 data flash for data storage which allows 100K times E/W
- 48-pin packages and 64-pin packages are available

■ Safety functions

- IEC60730 safety standard for home appliances
- Data calculation circuit for checking RAM status
- Clock frequency accuracy measuring circuit for confirming
