

CCTV Cameras and DVRs Market Expanding

With CCTV cameras being installed in busy markets of small cities and demand increasing from residential sector, this industry is set for tremendous growth

UMA GUPTA

Swelling crime rates and terror attacks have made CCTV-based surveillance imperative. The need of safety and security in almost every walk of life has fuelled the demand for CCTV cameras, which has ultimately translated into lucrative opportunities for vendors and suppliers.

The Indian CCTV camera mar-

ket is growing at an enormous pace. Expanding at a CAGR of 30 per cent, it is expected to more than double to Rs 22 billion by 2015 from about Rs 10 billion at present, according to an ASSOCHAM study.

Where is the demand coming from

Most of the demand is coming from the government sector, which is likely to remain the biggest growth driver.

Security has a major role to play in the banking industry too.

"The government is determined to safeguard all public places such as markets, airports and railway stations. Hence the demand from the government sector remains high compared to any other sector. Major customers of CCTV cameras include government offices, banks, hotels, schools, jewellery shops, retail sectors and corporates. However, in coming years, the demand from residential sector is expected to surpass other segments," informs Soumin Ray, national sales manager-security products, Matrix Comsec.

"Rising industrial activity amid security threats, and fear of potential terrorist attacks have fuelled the demand for CCTV cameras evidently as government authorities and private sector are investing huge amounts into installation," said ASSOCHAM secretary general D.S. Rawat while releasing the study on the CCTV cameras market.

A RIL (Reliance Industries Limited) led consortium is set to bag an important project of installing CCTV cameras at all the major traffic junctions in Mumbai. This project worth Rs 10 billion envisaged by the Maharashtra government will comprise installation of around 6000 CCTV cameras across the city. It will also include setting up of data servers in places like the National Stock Exchange and the Bhabha Atomic Research Center. This pioneering project gained ground after the terrorist attacks on 26/11 in the country's financial capital.

The state government intends to
