

Audio and Video Editing Tools

The Utility section of this month's EFY DVD brings to you some of the best audio and video editing software. And for those situations when you lose your data accidentally, the DVD includes an excellent recovery software

SRINIVAS N.C.

Audacity

Audacity is a free digital audio editor and recording application, available for Windows, Mac OS X, Linux and other operating systems. In addition to recording audio from multiple sources, Audacity can be used for post-processing of all types of audio, including podcasts, by adding effects such as normalisation, trimming, and fading in and out. Audacity software has been used to record and mix entire albums.

Audacity allows import and export of WAV, AIFF, MP3, Ogg Vorbis and all file formats supported by libsndfile library. It supports free loss-less audio codec (FLAC) and additional formats

such as WMA, AAC, AMR and AC3. It is capable of recording and playing sounds, editing via cut, copy and paste with unlimited levels of undo, multitrack mixing, large array of digital effects and plug-ins.

Avidemux

Avidemux is a free and Open Source program for video editing and video processing. It is written in C++, and uses GTK+ or Qt for its user interface. It is capable of non-linear video editing, applying visual effects called filters to video and transcoding video into various formats. Some of the filters in this software have been ported from MPlayer and Avisynth. It can also insert audio streams into a video file (muxing) or extract audio streams from

video files (demuxing).

The program has been designed around a project system that uses SpiderMonkey JavaScript engine. Whole projects with all options, configurations, selections and preferences can be saved into a project file. Avidemux has advanced scripting available for it both in its GUI and command line modes. It also supports a non-project system, where users can simply create all of their configurations and save video directly without making a project file. A project queue system is also available.

Avisynth

Avisynth is a frameserver program for Microsoft Windows. It acts as a non-linear video editor controlled entirely by scripting (without a
