

solution in the long term, or the new AMD Embedded R-Series processors, if attractive integrated 'embedded graphics' are required along with attractive pricing. It goes without saying that if inexpensive solutions are required, the third-generation Intel Core processors can be designed-in, in order to put OEMs in a position to directly move to the same platform when the Intel Celeron processor version presumably becomes available at a later date. But for high-end solutions, there is no way around the third-generation Intel Core processors. Some customers will also be looking for a solution based on ARM processors and USB 3.0.

Hardware integration services for USB 3.0 solutions

All these solutions are already possible today. And, for all these platforms, embedded computer manufacturers offer standard products, custom designs and

Fig. 3: Along with modular AMC- and VPX-based systems, with the KISS 2U server family, first proofs-of-concept on system level have already been realised. The servers are equipped with a FlexATX motherboard and offer several PCIe 3.0 interfaces as well as a PCI port along with USB 3.0. In comparison to designs with second-generation Intel Core processors, the KISS server in 2U rackmount format offers up to 20 per cent more computing performance, 50 per cent more graphic performance and an increase of up to 40 per cent in performance-per-watt

corresponding hardware integration services. So customers can concentrate on what they do best—the application itself. The corresponding application-ready embedded computing platforms and the matching hardware integration services including software support for, say, drivers or migrations, are provided by a partner. The partner—on

the basis of serial standard products—delivers fast and efficient support for individual implementations in a very close and trusting development partnership. In this way, bottlenecks can very efficiently be done away with. ●

EFY ENTERPRISES PVT LTD
D-87/1, Okhla Industrial Area, Phase-1, New Delhi-110020

TOTAL LED HOME LIGHT SOLUTIONS

LI-ION BATTERY

HOME LIGHT
(With Battery backup & Tiltable)

HOME LIGHT

LED LANTERN

LED DRIVER

LI-ION BATTERY - 7 times Smaller, 9 times Lighter, 3 times life compared to Lead acid batteries. Price cheaper than Lead acid batteries, considering similar Capacity.

PLASTIC HOUSING- Good Quality and trendy plastic housing for lantern and home lights (With Battery backup), WITHOUT paying TOOLING COST.

LED DRIVER-Microprocessor based LED driver with Multi-stage dimming(Configurable). Voltage and current can be configured to your needs.
