RECENTLY INTRODUCED IN INDIA, FROM NEAR AND FAR

TEST & MEASUREMENT

Wake-up sensors

Fluke Corporation has introduced Ti105 and TiR105 thermal imagers – the latest addition to its series of lightweight, rugged and easy-to-use imagers. Ti105 and TiR105 feature the Fluke IR-Fusion technology, not normally found in thermal imagers in this price class.

Ti105 helps plant technicians, HVAC/R professionals and electricians maintain and inspect electrical and mechanical equipment and components, enabling them to save time and money by finding potential problems before they become costly failures.

TiR105 enables building inspection and energy audit professionals to evaluate and report insulation problems, air leakage, moisture issues or construction defects.

Diagnostic insulation tester

Motwane has introduced a high-voltage digital insulation tester, called 5K-PI. This microprocessor-based insulation tester is suitable for testing insulation resistance of power transformers, distribution transformers, motors and generators, current transformers, HT cables, circuit breakers and other switchgears.

The instrument comes in an easy-grip, tough, industrial-grade casing

with detachable lid. Information is displayed on a large backlit LCD for easy viewing. The instrument has internal memory for storing up to 1000 readings

and PC software for data management. It provides programmable test voltage of 250-5000V, insulation resistance measurement up to 10 TΩ, and automatic algorithm to conduct diagnostic tests on insulation.

Semiconductor component tester/analyser

Lynx has introduced a low-cost semi-

conductor component tester/analyser from Peak Electronics, the UK, that can test and identify most semiconductor

devices and also find the pin-outs of the device under test.

The Atlas DCA55 automatically identifies the type of the part, pin-out and many component parameters. Components supported include bipolar npn/pnp transistors, Darlingtons, diode-protected transistors, transistors with built-in resistors, enhancement-mode MOSFETs, depletion-mode MOSFETs, diodes, diode networks, LEDs, two- and three-lead bicolour LEDs, JFETs and many more. Measurements displayed include transistor gain, leakage current, p-n voltage drops, LED voltages, MOSFET threshold voltages and much more.

Digital storage oscilloscope

GW INSTEK has introduced GDS-2000A series digital storage oscilloscopes in

two- and four-channel configurations. These oscilloscopes allow wide bandwidth selections, including 300MHz, 200MHz, 100MHz and 70MHz. They provide 2GSa/s maximum real-time sampling rate and 100GSa/s high-speed equivalent-time sampling rate.

Equipped with a 20.3cm, 800x600 high-resolution TFT LCD, 1mV/div to 10V/div vertical range and 1ns/div to 100s/div time base, the GDS-2000A Series can demonstrate waveforms of complicated and obscure signals.
