

High-definition oscilloscopes

Teledyne LeCroy has introduced two series of high-definition oscilloscopes with HD4096 technology—HDO4000 and HDO6000. Oscilloscopes with HD4096 acquire waveforms with a high resolution, high sample rate and low noise. Waveform displays are cleaner and crisper with 16 times more vertical resolution than traditional 8-bit instruments.

HDO4000 and HDO6000 series oscilloscopes are available in bandwidths from 200 MHz to 1 GHz. All models sport a large 30.7cm (12.1-inch) touch-screen display and intuitive interface to enhance operation. These also provide powerful debug tools, plus a full complement of automatic measurements and waveform math capabilities.

TOOLS & EQUIPMENT

Over-voltage protector

Nuteck Products has launched a compact over-voltage protector with user-friendly LED indicators. The device comes in three variants—3 kVA,

6 kVA and 10 kVA—with fixed trip setting for under-voltage and over-voltage. The input voltage range for

the 6kVA model is 150V AC to 470V AC, and the output voltage is 165V AC to 275V AC.

Computer-on-module

Kontron has introduced a new module in ULP-COM (ultra-low-power) standard, extending the scalable computer-on-module concept to several ultra-low-power and SFF smart devices. The highly scalable ULP-COM-sAMX6i with single-, dual- or quad-core ARM Cortex A9 technology covers a wide performance range. Based on Freescale's i.MX6 Series processors, it enables an efficient development of scalable smart devices that need an extremely compact, fanless design with balanced processor and graphics performance.

ULP-COM-sAMX6i supports the extended temperature range from -40°C to +85°C. It is ideal for market sectors demanding high ruggedness and long-term availability, such as transportation, medical and military.

POWER SUPPLY

AC/DC power supplies

Excelsys Technologies has launched XF series of highly reliable, ruggedised AC/DC power supplies for harsh environments including Mil-COTS applications.

These power supplies provide 400W to 1000W, with efficiencies greater than 90 per cent in a compact 1Ux268x127mm

package. Employing plug-and-play architecture, they allow users to instantly configure a custom power solution in less than five minutes.

Ideal for applications subject to extremes in temperature, the XF family operates over a wide temperature range of -55 to 70°C.

Pure-sine-wave solar UPS system

Aplab has launched an upgradeable, low-cost, high-efficiency, pure-sine-wave solar UPS system for homes. The Sunshine series is designed with high-frequency switch mode technology using DSP controllers to ensure lower harmonic distortion and higher crest factor tolerance. With the help of a bidirectional intelligent inverter-cum-battery charger, the UPS achieves very high AC-DC and DC-AC conversion efficiencies. This helps to reduce the heat losses and results in lower electricity bills. As DC-AC efficiency is more than 92 per

cent, use of the battery's Ah capacity is optimal, i.e., the same Ah battery will provide longer backup time than less efficient inverters. This reduces the ownership cost of batteries.
