

NFC mobile payments to cross \$100-billion mark

According to ABI Research, NFC mobile payments will rise from \$4 billion in 2012 to \$191 billion in 2017, breaking the \$100 billion mark in 2016. Mobile payments and, more importantly, the convergence between payment types (proximity, P2P and online) stored on a single NFC handset, will be the initial trigger driving market convergence across a host of other sectors, including ticketing, retail, loyalty and access control.

Smart card and IC vendors, device OEMs, MNOs, partnering service providers and payments networks are all set to benefit should convergence prove successful.

Research analyst Phil Sealy says, "Market convergence is at least two years away from reality. We believe transportation and ticketing will be the first market to benefit from convergence, with 26 per cent of all NFC handsets forecast to house a contactless ticketing application in 2017."

Consumer electronics set to grow marginally in 2012

Global consumer electronics revenue is set to expand by a scant 1.3 per cent in 2012 as brands focus on low pricing during the holiday season to lure buyers impacted by weak global economic conditions. The factory revenue of global consumer electronics original equipment manufacturers (OEMs) will

Lenovo MD named VP of MAIT

R.K. Amar Babu, managing director of Lenovo India, has been appointed the new vice president of MAIT—the apex body representing the IT hardware industry in India. Babu has been instrumental in driving Lenovo's India business and taking it to great heights today. He takes over from J.V. Ramamurthy (vice president, MAIT, and president and COO, HCL Infosystems), who has been appointed as the new president for MAIT.
