

BINAY - Lighting Up The Future

BINAY LED-based HIGH, MEDIUM and LOW Intensity Aviation Obstruction Light Beacons

As per International Civil Aviation Organisation (ICAO) requirements Available in Low Intensity, Medium Intensity and High Intensity versions (as per International Civil Aviation Organization guidelines), BINAY's patented LED Aviation Lights come with 5-year/3-year warranties

LED Obstruction Lighting for:

- Industrial chimneys and smokestacks
- Transmission, microwave and cellular towers
- Radio, TV and similar structural towers
- High-rise buildings and structures
- Airports and airfields

The BINAY LED Aviation Obstruction Light offers the following advantages:

- Fit-and-forget maintenance-free operation
- A long life of 100,000 hours (20 years at 12 hours daily burning)
- Pays for itself within a short period of operation in the form of reduced installation, maintenance and servicing costs
- Quick Installation; Reliable operation 365 days per year
- Shock-proof and vibration-resistant
- Over-Designed intensity to allow for natural LED intensity degradation over its operating lifetime

THE BINAY LED OBSTRUCTION LIGHT IS UNDER ACCEPTED PATENT, AND AS SUCH IS A PROPRIETARY PRODUCT

Exynos 5-based community board from Samsung

to feature both the world's first dual-core ARM Cortex-A15 MPCore processor and the world's first quad-core ARM Mali-T604 GPU based on 32nm high-K metal gate process technology.

The board provides OpenSource developers with a rich environment for producing the highest caliber of mobile applications.

The initial version of Arndale board will ship with Android Jellybean OS.

World's smallest x86 quad-core system

VIA Technologies claims to have developed the world's smallest x86 quad-core system. Called ARTiGO A1250, the system features a 1.0GHz quad-core E series chip with 1MB Level 2 cache that can use a single 8GB DDR3 1333MHz RAM module.

The ultra-compact system finds use in home server, home automation, hotel management, media streaming, digital signage and surveillance as well as medical and healthcare applications.

Epan Wu, head of the embedded platform division at VIA, said, "By leveraging the ultra-compact Pico-ITX form factor, the Artigo A1250 is able to deliver a powerful x86 quad-core computing experience in the smallest system design on the market.

A report by The Inquirer said: "The firm's Chromotion GPU provides Microsoft DirectX 11 support but uses up to 1 GB of frame buffer memory from the RAM." Measuring 17.7x12.5x3.0 cm³, the system is said to be 10 per cent smaller than VIA ARTiGO A1150 series."

ARTiGO A1250 can also easily decode H.264, MPEG-2, VC-1 and WMV9 video at 1080p HD resolution.

Intel unveils 20nm SSD memory

Intel has released its first solidstate drive (SSD) using 20nm NAND flash memory process. The 335 series 6Gbps SATA drive can replace a traditional, slower operating hard disk drive for faster access to files and programs. It comes
