

Enhance Your Circuit Design Performance

With the National Instruments design solution, you can rapidly prototype your printed circuit board using accurate simulation and flexible layout. NI Multisim 12.0 circuit simulation combines an intuitive environment with advanced analysis capabilities so you can optimize circuit behavior and visualize application performance earlier, before the first prototype. Multisim enhances your design approach with a database of components from leading semiconductor manufacturers as well as an expandable suite of analyses developed in NI LabVIEW.

- Simulate analog, digital, and power applications
- Visualize and optimize design performance
- Place, route, and design rapidly
- Reduce prototype iterations
