

STMicroelectronics enriches its **Cortex™ M4** portfolio combining highest performance and rich analog peripherals.

(Cortex MCUs with DSP & FPU)

STM32[®] F4 Series

- STM32F4 Series...Memory upto 2MB
- World's Highest Performance upto 168 MHz/210 DMIPS
- ART Accelerator™ and 7-layer bus matrix
- Low dynamic consumption: 230 μ A/MHz
- HS-USB, IEEE 1588 Ethernet, camera interface

STM32[®] F3 Series

- Mixed-signal MCUs with DSP and FPU
- 72 MHz Cortex-M4
- 64- to 256-Kbyte Flash
- Up to 48-Kbyte SRAM
- Rich Analog Peripherals...7x comparators, 4x PGA, 4x 12-bit ADC (5 MSPS), 3x 16-bit Σ ADC and 2x 3-phase MC timer (144 MHz)

Applications Served **STM32 F4**

- Points of sale/inventory management
- Industrial automation and solar panels
- Transportation
- Medical
- Security/fire/HVAC

STM32F4 Discovery Kit

Discover the STM32 F4 series, the STM32F4-Discovery Highlights the performances of the F4 series with audio (input, output) and USB Host capabilities.

Applications Served **STM32 F3**

- Dual motor control and power-factor correction (PFC)
- Advanced analog IP for efficient control and monitoring
- Solar inverters (microinverter topologies)
- LED lighting (high-end)
- Digital power conversion (entry-level digital power supplies)

STM32F3 Discovery Kit

Discover the STM32 F3 series, MCUs along with 9-axis MEMS sensors (gyroscope and e-compass), ready for 3D motion-sensing application development.
