

Bluetooth Smart products coming to the market.

The range covered by Bluetooth 4.0 is approximately 30 metres, typically. "There is nothing inherent in the specification itself that limits the range. Range is a function of the environment the wireless device is operating in and the device hardware itself (for example, how powerful the antenna is)," Jawanda adds. There are industrial applications of Bluetooth that have a range of approximately 1 kilometre.

New use-cases

Does Bluetooth 4.0 open up new use-cases, much more than Bluetooth 3.0 ever did?

The answer is 'yes,' and that's because of Bluetooth 4.0's ultra-low power consumption. Bluetooth is the key technology to bring billions of disconnected devices into the connected world. The

technology is already transforming industries like sports and fitness today.

Bluetooth is enabling manufacturers to efficiently embed their power-sensitive products with a high-performing and secure sensor technology that allows them to securely send data to devices their customers already have (their phones, tablets, PCs) and feed the applications on these devices or in

the cloud.

The data coming from the Bluetooth sensor is then turned into information by the application, delighting end-users and allowing OEMs to have a deep service relationship with their customers.

Jawanda says, "We see this transformation happening in massive verticals like healthcare, smart home and industrial automation. The 'Connected things' are all part of the bigger movement towards the 'Internet of things'

or IoT, and Bluetooth technology is considered as the backbone wireless technology to connect the billions of power-sensitive sensors ultimately to Web services.

"The proliferation of Bluetooth technology is booming, and ABI Research expects two billion Bluetooth-enabled products to be shipped in 2012 alone. The figure will grow to approximately 5 billion per year within the next few years."

A total of ten billion Bluetooth products have already been shipped since inception. This massive network of connected devices will double by 2017. The new use-cases stimulated by Bluetooth v4.0 (and its hallmark low-energy feature) are driving much of this growth.

Bluetooth 4.0 also complements the continued proliferation of Bluetooth Basic Rate/Enhanced Data Rate (BR/EDR) that has and will continue to power wireless audio devices like wireless headsets, speakers and headphones. ●

Tell Me More About Advertising Opportunities in EFY Magazine

I am aware that EFY Magazine presents umpteen advertising opportunities. I too would like to explore the various options available for my organisation, so that I can help it grow in terms of sales and brand presence. My details are mentioned below:

Name _____
Organisation _____
Designation _____
Address _____
City _____ Pincode _____
Phone _____ Fax _____
E-mail _____

- I would like to have a one-to-one meeting
☐ I would like to have a one-to-one meeting with someone from the EFY team.
☐ Please send me your marketing kit containing all necessary details.

Please mail/fax this form to:

EFY Enterprises Pvt Ltd

D-87/1, Okhla Industrial Area, Phase-I, New Delhi 110020
Tel: 011-26810601/2/3; Fax: 011-26817563
Email: efyenq@efyindia.com; Website: www.efyindia.com
