

resolution. It also features support for up to 8GB DDR3 memory, USB 3.0, HDMI 1.4a (3D) and a display resolution of up to 2560x2048 pixels.

Intel Medfield Platform

Specifications and benchmark results of Intel's 32nm x86 Atom SoC have been leaked. According to the leak, the Medfield tablet platform consists of a 1.6GHz CPU, 1 GB of DDR2 RAM, WiFi, Bluetooth, FM radio and some kind of GPU. The smartphone variant will probably be clocked slower. Also, there's no mention of whether a GSM/LTE radio will be included in the chip.

Intel Medfield 1.6GHz currently scores around 10,500 in CaffeineMark3. For comparison, NVIDIA Tegra 2 scores around 7500, while Qualcomm Snapdragon MSM8260 scores 8000. However, this doesn't seem to be fair comparison as the NVIDIA and Snapdragon chips have been out for a year.

Upcoming quads

Quad-core smartphones are guaranteed to be part of the next slew of high-end devices that aim to provide even greater performance improvement. Quad-core tablets have already been released, like the ASUS Eee Transformer Prime and the Lenovo IdeaPad K2.

Tegra 3

NVIDIA's KAL-EL/Tegra 3 is a quad-core chip with a GPU that is claimed to be three times faster than Tegra 2. The overall performance is estimated to be five times the performance of Tegra 2.

Project Kal-El processor implements a novel variable symmetric multiprocessing (vSMP) technology. vSMP includes a fifth CPU

core (the 'companion' core) built using a special low-power silicon process that executes tasks at low frequency for active standby mode, music playback and video playback. All five CPU cores are identical ARM Cortex A9 CPUs, which are individually enabled and disabled based on the work load.

Exynos 4412

Samsung has provided support for Exynos 4412 on its development boards.

The 4412 is similar to the Exynos 4212 and takes its cue from the ARM Cortex A9 platform touting four CPU cores. Each core has a clock speed of 1.5 GHz like that of the 4212.
