the major challenges for organisations in adopting IPv6, develop solutions for these challenges through education, technology and process improvements, provide advice and resource for enterprises and government bodies in Karnataka, and actively promote the

adoption of IPv6 in India.

The current version of IP addressing—IPv4—is reaching its theoretical maximum of about four billion Internet addresses. IPv6 is the new Internet addressing protocol with the capacity to support 340 trillion addresses.

Snippets

3G and 4G handsets to capture over half of handset sales in 2012

ABI Research's study *Mobile Device Shipment Market Data* predicts that 3G and 4G handsets will capture more than 50 per cent of handset sales in 2012. Jake Saunders, vice president of forecasting, said, "The outlook will yield growth in the order of 8 per cent netting 1.67 billion handsets shipped worldwide by the end of 2012."

2012 CES excites and catalyses

The 2012 *International Consumer Electronics Show (CES)* recorded more than 3100 exhibitors and more than 153,000 attendees, including more than 34,000 international attendees. The show saw the launch of more than 20,000 products and also featured executives participating in keynote sessions, including those from Qualcomm, Mercedes, Wal-Mart, Intel, Ford, Verizon, Unilever, Ford, eBay, GE, Google and Facebook.

Datawind to invest \$100 million in India

Canada-based tech company Datawind, the maker of the world's cheapest tablet Aakash, plans to invest \$100 million in India. Suneet Singh Tuli, CEO, Datawind, said, "We will use the fund for maintaining inventories and opening new plants in India."

MTS rolls out services for the business community

MTS has launched Mbiz services to suit the needs of the business community. According to Cheenu Seshadri, chief operating officer, south and west regions, MTS India, "As we enter 2012, MTS India continues to build on its promise of innovation. The latest in our list of firsts is Mbiz to provide unlimited local calling for our customers in Gujarat, Mumbai, Karnataka, Tamil Nadu, Andhra Pradesh and Kerala. This proposition has been specially designed to address the needs of high-usage customers including the business community."

Linear Technology acquires Dust Networks

Linear Technology Corporation has acquired Dust Networks, Inc. The acquisition will enable Linear to offer a complete high-performance wireless sensor networking solution. Dust Networks' low-power radio and software technology complements Linear's strengths in industrial instrumentation, power management and energy harvesting technology.

Moser Baer's Rajasthan solar park inaugurated

Dr Farooq Abdullah, union minister, Ministry of New and Renewable Energy, and Ashok Gehlot, chief minister of Rajasthan, have jointly inaugurated Moser Baer's 5-megawatt solar farm under Jawaharlal Nehru National Solar Mission (JNNSM) at Tinwari village, Rajasthan.

The project is completed under migration scheme of JNNSM launched during 2010 as a part of the first batch of projects. It will generate approximately 9,200,000 units of electricity per annum and save carbon emission equivalent to 8400 tonnes annually.

The solar farm uses 13,300 amorphous silicon thin-film modules and can generate electricity to light over 70,000 rural households. The farm has an exclusive remote monitoring system along with measurement of weather parameters.

About Solar and Solarsis solar plant in AP

US-based About Solar and Solar Integration Systems India (Solarsis) have announced commissioning of a 1-megawatt solar photovoltaic plant in Kadiri, Andhra Pradesh. The project was commissioned under the Rooftop and Other Small Solar Power Generation Plant scheme administered by Indian Renewable Energy Development Agency (IREDA) under the Jawaharlal Nehru National Solar Mission (JNNSM).

It is the first project in Andhra Pradesh to use About Solar's cadmium-telluride thin-film modules. The combination of About Solar's modules along with Solarsis' homegrown racking and mounting solution, cuts down on the overall balance-of-system cost of the project.

"This plant will generate operational data on different technology performance in Indian weather conditions as it uses 620 kilowatts of thin film based on About modules and 380 kilowatts of crystalline silicon with single-axis tracking technology," said Venkat Rajaraman, CEO, Solarsis.
