Microcontrollers

Microchip Technology has expanded its eXtreme low-power (XLP) microcontrollers line-up with the PIC24F GA3 family.

The PIC microcontrollers feature 150 microamperes/MHz active current, six direct memory-access chan-

nels and a low-power sleep mode with RAM retention down to 330 nA. Additionally, these offer V_{BAT} pin for battery backup of the on-chip real-time clock calendar, plus an integrated LCD driver besides other peripherals.

Smart voice processors

STMicroelectronics has introduced a Smart Voice family digital audio processor for multi-microphone applications.

The STA321MPL audio processor is based on an optimised hard-wired acoustic processing engine that offloads intensive computing tasks from the main application processor. It handles up to six digital microphone inputs with dynamic array reconfiguration and dedicated chan-

nel processing. The device integrates a scalable acoustic processing core with a tunable ten-band equaliser, peak limiter, and gain and volume controls.

Battery charger IC

Texas Instruments has introduced a battery charger integrated circuit that supports higher-cell-capacity batteries and increasing battery-charge currents of tablets, e-readers and smartphones.

The BQ24160 is a single-cell lithium-ion battery charger with dual

inputs, which allows operation from either a USB port or higher power input supply (AC adaptor or wireless power input). The two inputs are independent of each other and can be configured using an PC interface or standalone interface. The integrated field-effect transistors support charge rates up to 2.5 amperes from IN input and 1.5 amperes from USB input.

TOOLS & EQUIPMENT

Power controller

Satronix has introduced a microcontroller-based silicon-controlled rectifier (SCR) power controller. It is a three-phase/two-phase/single-phase phase-angle- or zero-cross-fired controller that linearly controls, with respect to the setpoint, AC voltage, current or true power applied to a three-phase electrical load.

The single-phase and three-phase

digital proportional controller is pre-installed on an engineered heat-sink, resulting in optimal thermal transfer in the minimum amount of panel space. The maximum surge survival technology includes a triple-layer protection against damage from voltage surges.

Room control system

Intellect Systems has added a room control system to its home automation suite WiseAboode.

The room control system is a direct replacement for existing switchboards. It controls multiple loads through 'mood templates' for illumination or creating different ambiances. All the

channels can accept any type of load including tubelights, CFLs, incandescent bulbs, LED lamps or fans. Individual channels are protected against overload and short-circuit. Additionally, the system has sensors for occupancy, light intensity and heat.
