

troller. All the pins are available on connectors.

Other features include eight-digit seven-segment display, 16x2 LCD connector, 128x64 graphics display connector, eight user LEDs, eight switches, one buzzer, one stepper motor and two servo motor drivers, on-board temperature sensor (DS18B20), USB-TTL driver, MMC/SD card, DS1307 real-time clock, 24CXX EEPROM, analogue-to-digital experiments, switches for external

interrupts and external power supply connector.

The development board can be directly powered from USB and is Arduino-, AVR-Studio- and BASCOM-compatible.

COMMUNICATION

Slim-line trading turret

Matrix Comsec has introduced EON141 trading turret with push-to-mute handsets for small- and medium-sized trading firms.

The digital trading terminal offers four pages with 84 speed-dial keys per page along with call-status indication. There are dedicated keys for pagination, trader login, voice mail and call logs along with additional user-programmable and call-control

keys. Single-touch privacy key on the turret allows immediate secured conversation.

POWER SUPPLY

Solar inverter

G P Tronics has introduced PowerRouter solar inverter from Nedap N.V., the Netherlands.

PowerRouter allows for self-consumption of solar power and selling surplus power to the grid with preferential tariff on Net metering basis. When the batteries are fully charged, solar power supports the domestic

load without discharging the battery, even when there is a power cut. Two fully independent maximum power-point trackers work in tandem to maximise the solar yield.

PowerRouter is available in 3, 3.7 and 5kW capacities for use as an independent power source.

Microprocessor-based protectors

Sollatek India Technologies, an Indian partner of the UK-based Sollatek, has introduced microprocessor-based surge protectors for household appliances. The protectors use patented AVS technology, which comes into play when the voltage goes beyond designated safe limits, protecting household appliances against spikes and surges and power-back surges.

These products are CE-compliant

and designed to be small, light and presentable. For areas with extreme voltage fluctuations, there is Sollatek's range of voltage stabilisers (SVS) for consumers and automatic voltage regulators (AVR) for businesses and industry, with correcting voltage at speeds of 750V/sec for SVS and 1250V/sec for the AVR.

LIGHTING

High-mast light

Binay Opto has introduced a PowerLED high-mast light for applications like traffic junctions, yard lighting and general outdoor area illumination. The lights are designed to IP65 standard and light distribution conforms to IESNA Type V standard.

Each light comprises several individual modular bars of high-power LEDs. Each bar can be articulated individually.

The light is available in various wattage ratings. A 450-watt PowerLED high-mast light can replace the light output of two 400-watt high-pressure sodium-vapour lamps (total wattage with ballast 1000 watts).
