

Introducing Energy Efficient Systems

- Smart 8bit Microcontroller Solutions for Industrial Applications

Infineon introduce a complete and scalable high-temperature 8bit microcontroller family capable of operating at up to 150 degree ambient temperature, meeting the most rigorous industry standard for use in automotive and industrial electronics application environments. The new XC82x/83x provides a highly effective alternative to the costly and complex heat dissipation and cooling systems and other alternative approaches used today to incorporate MCUs into harsh operating environments.

Contributes saving potential to:

- 1) inDrive - Efficient drive & automation
 - Smoother commutation
 - Brushless motors
 - Sensor-less motors with FOC Connectivity

- 2) inLight - Intelligent light system
 - LED lamp control
 - Ignition & power control of HID lamps
 - Connectivity to lighting networks

- 3) inPower - Smart power management
 - Controlled converters
 - Controlled battery charging

- 4) inTouch - Intuitive HMI functions
 - Multi gestural touch control
 - Displays
 - Connectivity to networks
