

2012. The PC market still represented the largest sector for chip demand, but desktop and mobile PCs did not sell well, as consumers' interest shifted to new mobile computing devices like smartphones and media tablets. This shift caused a substantial decrease in semiconductor demand in 2012, as the semiconductor content of a smartphone or a media tablet is far less than that of a PC."

Brocade to continue as wireless connectivity chips leader

In 2013 the number of standards-based wireless connectivity chips shipped will exceed five billion. This includes standalone Bluetooth, Wi-Fi, GPS, NFC and ZigBee, as well as connectivity combo ICs and platform solutions.

The leading supplier, Broadcom, will continue to dominate, benefiting largely from the fast growing connectivity combo IC market. Qualcomm will also see growth due to continued uptake of its Snapdragon platform in the smartphone market—according to a report by ABI Research.

"Increased diversification and building out product portfolios to include many wireless connectivity technologies is crucial to vendors' current and future success," said Peter Cooney, wireless connectivity practice director at ABI Research. "Both Broadcom and Qualcomm recently announced new NFC products, which will be an essential addition as this technology sees market acceptance over the next five years."

TERI calls for greater investments in smart technologies

Entrepreneurs and policymakers unanimously rooted for greater investments in eco-friendly innovations at the recently held 'Smart Design Technology for Clean Energy Applications Conference 2013.' Organised by The Energy and Resources Institute (TERI) and National Instruments India, the conference provided an international platform for discussions on issues pertaining to clean energy, smart system designs and their applications.

Calendar of Forthcoming Electronics Fairs/Exhibitions/Seminars/Events
