

buttons, as on a mechanical keyboard, and input data by pressing down on the keys.

Samsung T9000 refrigerator with built-in tablet

Samsung has come up with a four-door refrigerator that features a built-in 25.4cm (10-inch) tablet and certain apps.

The fridge includes a dual-purpose compartment that can change from fridge to freezer and vice versa. To help ensure optimal temperature and humidity control, as well as performance in each of the fresh food zones, the T9000 has Samsung's triple cooling system. This unique cooling technology ensures that commercial-grade humidity levels are maintained in the fresh food compartments with the help of two compressors, three

evaporators and an array of sensors to keep your produce fresh longer.

Lenovo ThinkPad Helix convertible

With ThinkPad Helix, Lenovo has introduced a tablet/ultra-book hybrid for business professionals. The device features a 'rip and flip' design—offering absolute mobile freedom with four unique ways to use it. It is a thin and light ultra-book with a detachable Windows 8 tablet. Perhaps, Helix's most visually striking feature is how it transforms from powerhouse ultrabook to portable tablet.

For added mobility, the 29.5cm (11.6-inch) tablet can separate from its base to become the thinnest full-function Intel 3rd generation Core tablet with vPro. The tablet weighs just 835 grams, also making it the lightest in its class.

It runs for up to ten hours, allowing you a full day of work and play. Navigation and interaction are easy with the precision on-board pen, full-size keyboard and new five-button clickpad that features 20 per cent more surface area than traditional ThinkPad clickpads.

Project Shield portable gaming device

Powered by the new Tegra 4 mobile processing chip, NVIDIA's Project Shield is a portable gaming device for open platforms. It is said to flawlessly play both Android and PC titles. As a wireless receiver and controller, it can stream games from a PC powered by NVIDIA GeForce GTX GPUs, accessing titles on its Steam game library from anywhere in the home.

Its most exciting feature is the

ability to stream games from your computer over WiFi. At the core of Project Shield is the world's fastest mobile processor NVIDIA Tegra 4, which delivers enormous power from its custom 72-core GeForce GPU and the first quad-core application of ARM's most advanced CPU core Cortex-A15. These, combined with its battery-saver core and energy-saving PRISM 2 technology, deliver hours of gameplay on a single charge.

Samsung's floating 4K TV

Samsung has set a new benchmark in TV size with its 216cm (85-inch) 4K TV—the world's largest ultra high-definition TV (UHD TV). S9 UHD TV features a pretty industrial design. It appears to be floating within its frame and its Timeless Gallery frame design "showcases the juxtaposition of a minimalist concept with a large display."
