Smart Substations

Create rock-solid and future-proof substation networks by partnering with Moxa. You can rely on our 25 years of expertise in proven solutions that include substation-hardened products. Moxa has delivered solutions in over 300 successful substation networking and computing applications around the world.

Moxa products are specifically designed for many different smart grid applications, such as renewable energy, substation transmission and distribution, and automatic meter reading. Moxa's solutions include the advanced technologies that are fueling the smart grid revolution. For example, IEEE 1613 and IEC 61850-3 certifications for substation applications and IEEE 1588 compliance for precision time synchronization are key features that upgrade large-scale electric power networks to the next level of reliability and efficiency. All of Moxa's products are toughened to overcome harsh environments, ensuring consistent operations even in the most demanding conditions. Tap into Moxa's expertise in device control, computing, and communications to easily build an efficient and effective Smart Grid.
