

HD or Full-HD to UHD-level picture quality by restoring detail information to enable greater precision and real-life picture quality.

With Samsung's Precision Black Pro technology, S9 delivers deep, real blacks as well as pure vivacious whites. It combines a high contrast ratio and Ultimate Dimming control functionality—which utilises hundreds of LED blocks and precise BLU control—to deliver sharp resolutions previously unseen on large-format displays. In addition, S9 combines a powerful sound system with a fast quad-core processor to ensure a premium experience and multi-tasking capabilities between content and apps.

S9 provides 3-way, 2.2-channel, 120-watt sound for an audio experience six times better than a typical TV.

Razer Edge gaming tablet

Designed for PC gamers, Razer Edge combines the best features of a tablet, PC and game console in a single touch-screen device. It is claimed to be the only tablet running Windows 8 on both an Intel Core Processor and NVIDIA GeForce GPU.

Razer Edge packs a 25.7cm (10.1-inch) touchscreen, DDR3 RAM and a high-speed solidstate drive for faster loading of Windows 8 and frequently-used games and programs. Additional accessories include a force-feedback gamepad controller, keyboard dock and docking station for gameplay on an HDTV.

What's more, it has four modes specially designed for gamers: tablet, keyboard dock, gamepad controller and docking station.

Withings smart activity tracker

Withings has introduced an 8gm device that helps users achieve their health and fitness goals. The Smart Activity Tracker from Withings is a powerful and pocket-sized personal tracking tool. It adds pulse measurement to the number of steps taken, strides run, distances covered, calories burnt and quality of sleep.

It takes weight and body fat readings and beams info either over Wi-Fi or Bluetooth to its companion app for iOS or Android. As the scale can also detect air quality, you can use the device in your bedroom to figure out when you need to open a window to increase air flow.

The front of the device features a fully functioning touch surface that lets users navigate from screen to screen. The back houses the heart rate sensor, where users simply need to place their finger in order to take their readings. The device offers a two-week battery life and has an on-board micro USB port for recharging.

Panasonic 50.8cm 4K tablet

Well, 4K was the buzzword at CES this year. And the new ultra-HD 50.8cm (20-inch) Windows 8 tablet from Panasonic surely gave a tough competition to most of the other companies' 4K offerings showcased at the event.

Its IPS Alpha LCD panel features a 3840×2560 (9.83 million pixels) resolution—more than twice the horizontal and vertical resolutions of full HD (1920×1080). With an aspect

ratio of 15:10, it can display an A3-size paper in almost full size, making it ideal for showing content such as newspapers and magazines, as well as pictures with the same aspect ratio.

The demo tablet on display at CES ran Windows 8 Pro, and was powered by a 1.8GHz Intel Core i5 3427U vPro processor, with 4GB of RAM (expandable to 16GB), as well as discrete Nvidia GeForce graphics and 128GB SSD.

The pen input, with a resolution as high as the panel's, enables natural handwriting on the tablet. Weighing 2.4 kg and 10.8mm thick, the tablet is easy to carry too. ●
