

TI LM3447

Phase dimmable primary side power regulated single-stage PFC flyback controller for LED lighting

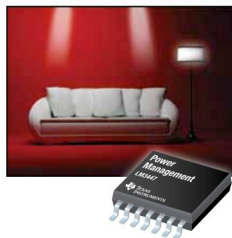

LM3447 based tested and proven 5W to 16W reference designs to suit Indian power conditions

- Wide input range:
100V to 300V AC
- Single-stage PF corrected isolated designs
- High power factor: >0.9
- Low THD: <10%
- High efficiency
 - >80% for 5W
 - >85% for 16W

Features of the Controller

- Primary side control – isolated designs without secondary feedback
 - No opto-coupler and no feedback transformer
- Integrated phase angle decoding – can be used with any type of dimmer
 - Compatible with leading edge (triac) and trailing edge (transistor) dimmers
 - Dimming down to 2%
- Integrated power factor correction
 - Single-stage high PF corrected isolated drivers
- Input power regulation scheme with improved line regulation
- Fixed frequency DCM with valley switching operation
 - High efficiency and low EMI
- Thermal fold-back function
 - LED array protection against over temperature
- LED protection LED open-circuit and short-circuit protection
