

Crystal-free 8-bit USB PIC® microcontrollers cut system costs and power consumption

0.25% clock accuracy enables USB connectivity, eliminating the need for external crystal

Microchip's lowest-cost and smallest-form-factor USB microcontrollers (MCUs), feature pin counts of 14 to 100 pins and are the first 8-bit MCUs to integrate LCD control, battery-backed RTCC, and USB on a single chip.

Microchip's latest USB PIC® MCUs feature internal clock sources with 0.25% clock accuracy to enable USB connectivity with no external crystal. They are also the first USB MCUs to combine pin-counts ranging from 14 to 100, with high peripheral integration and up to 128 KB of Flash. The eXtreme Low Power (XLP) technology also keeps power consumption down to 35 µA/MHz in active mode and 20 nA in sleep mode.

Lowest-cost and smallest-form-factor

The PIC16F145X MCUs give you USB connectivity and capacitive touch sensing, in addition to a wide range of integrated peripherals with footprints down to 4x4 mm.

High-performance touch-sensing with USB

With an integrated Charge Time Measurement Unit (CTMU) and 1.8 V to 5 V operation, PIC18F2X/4XK50 MCUs are pin-compatible with legacy PIC18 MCUs, giving an easy migration to higher-performance.

USB plus LCD control and a RTCC with Vbat

The PIC18F97J94 family gives you USB connectivity with LCD control, and a battery-backed real-time clock/calendar (RTCC), all on a single 8-bit PIC® microcontroller.

GET STARTED IN 3 EASY STEPS:

1. Choose a peripheral mix and pin count to suit your application
2. Use the free USB stacks and software drivers for faster design
3. Start developing with low-cost development kits
