

SCIENCE FICTION BECOMES SCIENCE FACT

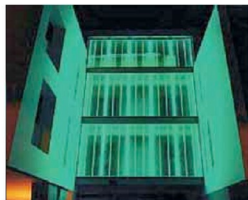

SAY GOOD BYE TO NEON AND LED'S

Light Tape INDIA
BRING YOUR IMAGINATION TO LIGHT!

The Whole New Generation of Lighting technology

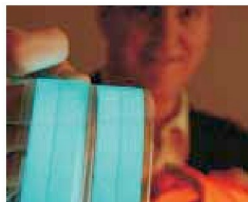

Thinner than a credit card
(less than 0.02")

Light Tape Is Changing The Way People Think Of A Light Bulb.

Imagine a light bulb you can bend around any surface for hundreds of feet, indoors or out. It's as thin as a credit card and cost effective of what other LED, fiber optics, neon, or fluorescent lighting systems cost to operate or maintain.

Light Tape is the longest, thinnest, brightest and most durable electro luminescent light in the world with Electro-LuminX's patented technology and manufacturing processes.

It Burns Less Power Than Old-fashioned lighting.

The unique low energy design uses only 6 watts per square foot (0.5 watts per linear foot for 1 inch width) with even illumination. At an equal brightness of 140 cd/m², a 1" width strip of Light Tape is 40% more efficient than LED's, and our 1/2" Light Tape® is 80% more efficient than LED's.

Your Only Limitation Is Your Imagination

Light Tape has endless applications like Architecture, Automotive Animated Advertisements and Signage, Safety, Marine, Entertainment, retail +more You can illuminate anything with Light Tape. If you have a brilliant idea, Light Tape will bring it to light. In fact, you've probably already seen the bright applications of Light Tape people just like you have envisioned for this amazing breakthrough.

Light Tape Animation, Eye-catching Moving Electronic Display

A Light Tape Animated Sign is similar to neon, but far more realistic because it operates within a high-resolution printed image. We divide the image into several different sections that can be illuminated separately from one another. you can program and sequence each section to create the appearance of movement within the static printed image.

"Light Tape was found to be more visible in smoke than LEDS after a smoke test performed by the San Paolo Fire Department. The Fire Commission found Light Tape to be clearly visible and provided enough illumination to navigate in emergencies. Brazilian Subway, San Paolo"

A NASA study for the Air Force on Electroluminescent Lighting showed the technology was easily visible from distances over five miles away. Notably Light Tape light penetrates fog, smoke, snow, haze and other normally poor visibility conditions.

Light Tape India was Launched and promoted in Electronics Rocks' 2012
