

Basic Electronics and Embedded Systems Tutorials

Here are a few websites that are useful for hobbyists and budding engineers with their collection of tutorials in electronics from the basics to advanced level

Raspberry Pi Tutorials

This website offers free, comprehensive Raspberry Pi tutorials. It takes you through a list of tutorials from using your device to programming your Raspberry Pi. The tutorials are targeted at anyone who can read and has access to a computer that can run computer programming language Python. You need not have any experience with a computer or programming in order to follow these instructions. All you need is your interest in Raspberry Pi.

Electronics Tutorials

Offering free, comprehensive basic electronics tutorials in amplifiers, antennae, filters, oscillators, power supplies, receivers, radio and electronics designs, it covers over 120 individual topics with links to datasheets, reference books and projects. The website provides you with a site tree of all the electronics tutorials offered on it. It continues to expand and provide updated information—states the homepage.

SparkFun

SparkFun is an online retail store that sells the bits and pieces to make your electronics projects possible. In addition to products, SparkFun, through its Department of Education, offers classes and online tutorials designed to help educate individuals in the world of embedded electronics. The site has free tutorials on how to design new SMDs and basics of PCBs.

MyTutorialCafe

This website is dedicated to the MCS51 microcontroller and related products (both hardware and software). It includes the traditional 8052, 8051, 8032 and 8031 along with more modern derivatives such as the Atmel AT89S8252, and many derivatives by Silicon Laboratories, Philips and others. The tutorial section mostly covers MCS-51 microcontroller. Electronics Point is a community of electronics experts and hobbyists. Like most forums, it has a good FAQ section to clear your doubts.
