

What is live DVD?

A live CD/DVD or live disk is a CD/DVD containing a bootable operating system—the core program of any computer, which is designed to run all your programs and manage hardware and software.

Live CDs have the ability to run a complete, modern OS on a computer even without secondary storage, such as a hard disk drive. It directly runs the OS and other applications from the DVD drive itself. Thus a live disk allows you to try the OS before installing it, without erasing anything on your current system. Such disks are used to demonstrate features or try a release, including testing hardware functionality, before actual installation.

Installation

The Fedora installer starts and prompts to select the appropriate keyboard for the system. Figs 4 and 5 show few of the steps that need to be followed to proceed with the installation. The next screen prompts to select the type of installation as shown in Fig. 6.

Fig. 3: Beginning the installation

Fig. 4: Keyboard type selection

Fig. 5: Storage selection for installation

Fig. 6: Installation type

Fig. 7: Finishing the set-up

Be very careful while selecting the type of installation. If you need to install FEL along with your existing OS, select 'Use Free Space.' Else, select 'Shrink Current System' if you do not have a free partition left on your system. Now click 'Next' and 'Confirm' to start installation. The Fedora installer will copy all the necessary files and prompt to reboot the system.

Reboot your system without the DVD in the drive and follow on-screen instructions to finish installation and set-up.

If your hardware does not meet the requirement for running GNOME 3—a desktop environment (GUI) that runs on top of Linux-based computer system—your computer may boot into the default desktop environment. You can use the DVD even with these settings without any issue. To install in this environment, click Application→System Tools→Install to Hard Drive. After this, the steps are the same as mentioned above.

To read more about how to install more software in Fedora and many other things, visit docs.fedoraproject.org. This website has almost all the information that a new user requires. So what are you waiting for? Pop the DVD in your computer and start experimenting with Linux and its tools. ●
