

Learning DSP

With increase in electronics R&D, digital signal processing (DSP) is being used in a wide variety of applications. It is the science of using computers to understand and process signals from different sources. Here are some resources available on the Internet that will help you understand DSP better

DSPRelated.com

The home page of DSPRelated.com claims the website to be the most popular independent Internet resource for DSP engineers around the world. It was launched around 1999 and has been growing since then. The website is categorised into different sections and has a list of blogs, forums, printed books, online books and papers related to DSP. The site also has a list of jobs and employers of DSP engineers.

dspGuru

The site offers tutorials to demystify DSP. The FAQs page not only provides rarely given answers about DSP but also offers a basic introduction to a variety of DSP topics. dspGuru is a collection of free information on DSP, which is categorised into different sections. It has an interesting page on DSP Tricks too.

DSP Guide

The caption on the homepage "Yes, It's true - You can browse and/or download the entire book without charge" says it all about this website. The site allows you to browse and download 34 chapters of the book *The Scientist and Engineer's Guide to Digital Signal Processing* by Steven W. Smith. A good resource for students and professionals alike, the site also has dedicated sections for comments and feedback from the users, free software and teaching aids.

Red Cedar Electronics

This website is a complete answer to the question "How do I learn DSP?" It was written by Dale Grover, with inputs from Rick Lyons, Randy Yates and Grant Griffin. The site has references to different online resources to learn and understand DSP. The content on the site is not intended as a comprehensive review of DSP but as a framework for pointing the DSP newcomers to some useful approaches to learning DSP.

The DSP Dimension

The DSP Dimension is one of the leading German companies that provides software development and consulting services for the video/audio music industry. The website is a resource for signal processing tutorials and software. It was started in 1999 as a platform for online courses and tutorials on DSP as part of Stephan Bernsee's lectures on advanced audio DSP held at various institutions around Germany. It soon became a standard resource for specialised DSP topics like time stretching and pitch shifting.
