

Flexible robot

controlled by pumping air into the limbs—either manually or via computer. This gives the robot a range of motions including crawling and slithering.

The robot crawls by using a network of valves and tubes that guide air into and out of four elastomer leg compartments called 'pneu-nets' and a body section. The robot uses no sensors, five actuators and a simple pneumatic valving system that operates at low pressures (<10 psi). A combination of crawling and undulation gaits allows the robot to navigate a difficult obstacle.

World's smallest live broadcasting vehicle

Kiban International has developed what it claims to be the world's smallest mobile broadcasting vehicle—Honda Gyro. It is based on Roland Corporation's AV mixer that can live-stream over the Internet.

This audio-video mixer is called VR-3. The 2kg VR-3 features a four-channel video switcher, built-in touchscreen LCD monitor and built-in stereo monitor. The most important update of this version is that it has the capability of sending both video as well as audio to a PC using a USB cable port. The new technology is controlled by four composite ports and a D-Sub port. The monitor displays four outputs simultaneously. By pressing both the input and the output buttons together, the output picture is overlaid on the monitor screen.

Capacitive-coupling wireless power transmission module

Murata Manufacturing has introduced LXWS series capacitive-coupling wireless power transmission module that enables wireless recharging of tablet PCs and other mobile devices. This module provides wireless power transmission of 10 watts through use of the power-sending and power-receiving set.

The module, used in Hitachi Maxell's wireless recharging set Air Voltage for iPad2, is capable of removal-detection and error-detection functions, has a high transmitting efficiency and high level of positioning freedom that enables construction of convenient wireless recharging systems.

Its electrodes generate minimal heat, making it is easy on the battery. Also, it can be easily incorporated into the

CAUTION NOTICE

Notice is hereby given to all concerned including the Manufacturers, Merchants and Traders dealing inter alia with "LED Aviation Obstruction Lighting Device" Our client, Kusair Krishna Rohatgi of Binay Opto Electronics Private Ltd. is the Patentee of Indian Patent No. 186668 of 18th May 1998 relating to "LED Aviation Obstruction Lighting Device". Therefore, it would not be lawful for any person without the written consent, of our client, to indulge in any act of **MAKING, PURCHASING, USING (AS END USER/CUSTOMER), OFFERING FOR SALE, SELLING OR IMPORTING** such device in India during the subsistence of this patent.

It is further made known to all concerned that any unlawful act by any person would not be acceptable to our client, who may decide to take legal action against the infringers for such wrongful act in a Court of Law.

All concerned in the Trade and Commerce and hereby requested to contact the undermentioned address or any further details regarding the above and to avoid unnecessary litigation and/or legal proceedings.

BINAY PowerLED Dome Type High Bay Light

Super Energy
 Super Energy
 Super Energy
 Designed for Long and Reliable System Lifetime

BINAY's PowerLED Dome Type High Bay Luminaire are a one-to-one replacement for existing HID High Bay Luminaire, and offer low power consumption and a maintenance-free long life in an economical form factor

- Saves 80-90% power consumption over Metal Halide or HPS
- Life of 10 to 15 years eliminates regular bulb and ballast replacement costs
- Instant turn-on to full brightness
- Full spectrum white light providing greater clarity and visual acuity; improves visibility and safety
