

## We provide Advanced Ceramic PCB interconnect solutions for our worldwide customers.

Customized design for instruments, medical, hearing aids, sensors, automotive, LED module, power supplies, and telecommunication electronics product.

### SPECIALIZE IN:

- Manufacturing thick-film ceramic substrate hybrid microcircuit
- Laser through hole on ceramic board for printing multi-layer circuit connection
- Single and multi-layer printing process on ceramic board
- SMT & through hole PCB assembly lines
- Passive/active laser trimming for printed resistor
- Epoxy/conformal coatings
- Testing solutions

**Hycer Private Limited**

Blk 1022, Tai Seng Avenue #05-3516/3518, Tai Seng Industrial Estate, Singapore 534415

Tel : (65) - 63830328, Fax: (65) - 63833928

E-mail: sales@hycer.com.sg

We Welcome Agent!

## EKTAETEL SERIES DSP SINE WAVE HOME UPS-INVERTER

With Active Battery Monitor, Error Correction, SSS and Line Noise Filter

As Economical as @ Rs. 7.5/VA

India's Only  
DIGITAL HOME  
UPS - INVERTER  
with  
IEC standard  
compatible

### Silent Features

- Capable To Take Full Load
- Protection against High Voltage as high as 440 V or even more
- Protect the connected gadget/appliance in event of short circuit
- Protection Against Battery Reverse Polarity (Optional)
- Protection against heavy load as 600%
- Solar Operation Also (Optional)
- Pure Sine Wave Output-Smooth Operation

Wanted Distributor And Dealer For All States Of India And Asia

government policies and perceived operations risk. On these parameters, India compares unfavourably with China and Mexico – its closest competitors.

### How are 'made in India' products perceived?

India has earned good reputation for quality, technical excellence and protection of intellectual property. This is more so in view

of inconsistency in the dealings and quality from China. The developed countries look to India as an alternative to China as they do not want to put all their eggs in one basket. The Indian democracy, political stability, English-speaking educated population and the huge domestic market are among the great Indian attractions.

### Main hurdles

1. Lack of a strong component base in India compared to other countries
2. Complex taxation structure and procedural difficulties make the fresh investments difficult into the component industries
3. High infrastructure cost
4. High cost of finance
5. High cost of power
6. Disconnect between R&D and industry. There is a need to develop and promote R&D centres of excellence and integrate into manufacturing

But India is facing disability factors vis-à-vis other Asian countries to the extent of 17 to 18 per cent. Unless these factors are addressed, Indian products cannot be competitive in the global market. Be it poor infrastructure, high cost and poor quality of power, high cost of capital, multilayer taxation, complex procedures, inverted duty structure, weak R&D base and poor availability of raw materials, all add up to make Indian electronic products less competitive in the global market.

### Looking ahead

There is a huge cost pressure in China today. The labour there is constantly fighting with companies to increase the labour rates. So the companies which have invested in China are likely to invest in India. As the potential is very large in India, everybody wants to have a slice of pie in the industries which are performing well.

Thankfully, the Indian government too has finally woken up to the problems of the Indian electronics industry. It has come out with National Manufacturing Policy and the Draft National Policy on Electronics (NPE-2011), in an effort to address most of these issues. If these policy measures are implemented within an envisaged timeframe, a level-playing field will create for Indian entrepreneurs to compete with global manufacturers. Then, with the intrinsic strength enjoyed by Indian entrepreneurs, India is bound to become a global manufacturing hub! ●
