

Railway Applications DC/DC converters

The **Powerline Railway** series operates up to $+100^{\circ}\text{C}$ with full load.

The **RPR-B series** can be supplied with a baseplate and mounting holes for high vibration applications.

NEW!

The **RPR-F series** has a low profile case.

NEW!

The standard **RPR series** has a built-in heat-sink to optimize heat-transfer and efficiency.

The RPR series DC/DC converters are designed for railway applications where a small sized and high efficiency converter is required. The converters comply with the EN50155 and NFF 01-510 input voltages without needing external components. Although the case size is compact, the converter contains a built-in EN55022 Class B / FCC Level B EMC filter. The RPR series is available in either PCB or baseplate-mounting versions.

RPRxx series - Main features:

- ✓ 20W, 30W, 40W and 50W railway grade converters
- ✓ Very compact size
- ✓ Complies with EN50155, NFF 01-510 standards
- ✓ Three input voltage options cover all railway DC voltages
- ✓ PCB ribbed, flat case or baseplate mounting options
- ✓ High efficiency, high reliability design
- ✓ CE certified
- ✓ Input voltages: 24V, 48V and 110VDC
- ✓ Output Voltages: 3.3, 5V, 12, 15V, 24V, $\pm 12\text{V}$, $\pm 15\text{V}$
