

Infineon ModSTACK™ and PrimeSTACK™

High power stacks to meet highest demand in renewable solutions

THE ModSTACK™ FAMILY includes Infineon Technologies IGBT modules with IGBT driver to achieve current ratings from 100 A up to 1700 A at line supply 690 V AC. The appropriate interfaces and thermal management are included. All inverter topologies (B6U+B6I; B6I+B6I etc.) and various converter topologies are available.

THE PrimeSTACK™ FAMILY is a complete switch assembly for power electronic circuits containing all the necessary components for current, voltage and temperature measurement based on the established 62mm IGBT modules. Control electronics and power section are fully separated from each other by "reinforced isolation". With several superior monitor functions, PrimeSTACK™ offers a self protecting switch function. With PrimeSTACK™ highly efficient and safe inverters can be developed very fast with minimum effort for the designer. The product scope covers chip current ratings from 100 A up to 3600 A at 600 V, 1200 V or 1700 V.

Features

- Short time-to-market and reduced system costs due to "ready-to-use" power section
- Flexible system for power solutions due to modular approach
- Modular stack design for industrial approved cabinets
- Various power electronic available
- Easily expandable by paralleling units
- Optimized integrated thermal management
- Low inductance IGBT stack design

Applications

- Industrial drives and elevators
- Renewable energy and other Distributed
- Power Generation systems
- UPS
- Traction
- Medical technology
- Energy treatment and HVDC conversion
- Galvanic, electrolysis and electroplating
- Pulsed power
- Asynchronous power links
