STMicro bags IEEE Award

STMicroelectronics has been awarded the 2012 Corporate Award from the IEEE Standards Association (IEEE-SA) in recognition of its leadership and contributions to the development and advancement of standards in electrical and electronics engineering.

Sankalp selected as 2012 Red Herring Top 100 Global

Sankalp Semiconductor is the winner of Red Herring's Top 100 Global Award as this year's most promising private technology venture from the Asia business region.

Silicon Power awarded for storage drives

Silicon Power has bagged the Golden Pin Design Mark 2013 Award for its USB flash drive, portable hard drive and solid state drive design. The Golden Pin Design Mark, hosted by the Industrial Development Bureau, is one of the most prestigious design recognitions in industrial design, visual communication design, packaging design and interior design in Taiwan.

Mouser named distributor of the year

Mouser Electronics has bagged the European 2012 Bourns Distributor of the Year POS Growth Award. The award, presented at this year's Electronica event in Munich, Germany, was based on overall POS per cent growth for European sales. Mouser had the highest growth percentage year-over-year among Bourns' all catalogue distributor partners.

Baddi in Himachal Pradesh. It aims at an initial capacity of 250,000 handsets a month.

The company's board has also accepted the move to start a facility to produce tablets—a media report said.

"If all goes as planned, the company should meet at least 25 per cent of its targeted sales of one million handsets a month next year. Intex hopes to scale up production in phases and meet its complete requirements in four years," Narendra Bansal, managing director of Intex Technologies, said.

Crompton Greaves to set up IED plant

Crompton Greaves (CG) is setting up an intelligent electronic device (IED) manufacturing plant in Jigani Industrial Area of Bengaluru. The plant will also assemble control and relay panels using these IEDs, complying with the latest substation automation standard IEC 61850.

Videocon to roll out 4G services

Telecom vertical of Videocon is set to roll out fourth-generation (4G) services in select circles. The six circles that will receive these services are Uttar Pradesh

(East), Uttar Pradesh (West), Madhya Pradesh, Bihar, Gujarat and Haryana.

"We will get spectrum in January and we expect to roll out our LTE services in six circles by middle of 2013. We will have spectrum across seven circles (including Punjab) constituting a high population footprint in India. These are also the areas where we enjoy a strong position already and where we see the highest potential for continued growth and profitability," said Arvind Bali, services director and chief executive officer, Videocon Mobile.

TÜV Rheinland to expand

Technical service provider TÜV Rheinland plans to hire 600 employees in India in the next three years to meet the growing demand for its services. The company will also make two new testing laboratories operational in the coming months.

In India, TÜV Rheinland currently employs around 400 highly skilled professionals. Working in 23 regional offices and eight laboratories spread over 18 cities, they inspect, test and certify people, products, installations, processes and management systems against international standards.

TE Connectivity eyes \$1 billion from India by 2016

Switzerland-based electronics components major TE Connectivity is looking at \$1-billion revenue from India in four years from now. Its Indian subsidiary is mulling over cutting down on imports from its associates and group companies abroad considering the depreciation scenario.

"We would like to increase local sourcing of our components to 60 per cent from the prevailing 25 per cent given the dollar depreciation that has happened recently," said V. Raja, president and managing director, TE Connectivity India.

Tektronix expands distribution channel

Tektronix has announced a new agreement with Convergent Technologies that will enable Convergent to offer customers the full portfolio of Tektronix products including high-performance oscilloscopes, signal generators, real-time spectrum analysers, logic analysers, Keithley precision test instruments and the MDO4000 Series mixed-domain oscilloscope.

Under the agreement, Convergent Technologies will work jointly with Tektronix to configure test solutions and consult on a wide range of application test requirements with customers.

NI acquires Germany-based Signalion

National Instruments (NI) has acquired Dresden, Germany-based Signalion GmbH. This acquisition will deliver strong wireless communications talent and technologies to the NI platform, which is critical to NI's growth in wireless technology.

The Signalion division will be managed by founders Tim Hentschel and Thorsten Dräger, who will be working closely with NI's R&D unit to evolve the capabilities of NI LabVIEW system design software and modular PXI hardware for wireless test applications.
