

Presenting the most comprehensive industry relevant training solutions in fiber optics

These customized configurations are built around our popular Fiber Optic Modules, designed to help undergraduate and postgraduate students to understand concepts of OTDR, Chromatic Dispersion, WDM etc.

Building Blocks of an OTDR

This setup is designed to give an insight into the building blocks of an OTDR. Students can understand construction and functioning of an OTDR.

Wavelength Division Multiplexing

This setup consists of industrial grade passive components like Couplers, Isolators, Attenuators and WDM. Wavelength Division Multiplexers (WDM) are the passive devices that combine light signals with different wavelength coming from different fiber, on to single fiber.

FOM-5 : Erbium Doped Fiber Amplifier Module

FOM-5 is a complete solution to build and study EDFA. The module consists of passive component bank along with 1550nm source and 950nm laser pump. The PC interface along with the powerful GUI makes it easy to set, control and observe various parameters.

Chromatic Dispersion

This setup is designed to measure Chromatic Dispersion in an optical fiber. A special purpose fiber is provided for laboratory use to make the study more precise and easy.

FOM-6 : CWDM and Bragg Grating Module

FOM-6 is designed for the study of Coarse Wavelength Division Multiplexing (CWDM) and Bragg Grating. Its four DBF Lasers of different wavelengths in 1550nm window and GUI on PC makes it simple to handle and observe various parameters.

Dealers active in Engineering Colleges, Polytechnics, ITI's and other Technical Institutions, willing to work with us may write to - director@falconindia.biz

FALCON ELECTRO-TEK PVT. LTD.

Falcon House, Plot No.A-194, TTC Industrial Area, MIDC, Khairne, Navi Mumbai - 400 709, INDIA
