

Gate Drive Optocouplers and Isolation Amplifiers for IGBT and MOSFET Protection

Your design requires quality you can count on.

Protection features are important for ensuring safe and stable power converter operation in power inverter applications such as solar and wind power generation systems and motor drive.

IGBTs and other power devices used in these applications require full protection to avoid damage resulting from conditions such as:

- Short circuit
- Overload
- Parasitic turn-on due to Miller capacitance
- High voltage spike due to during turn-off
- Under voltage
