TEST & MEASUREMENT

Network analysers

The N523xA PNA-L vector network analysers from Agilent Technologies replace the existing N5230C models. These provide design and manufacturing engineers with a performance of up to 50 GHz, along with lower cost and future-proof capabilities.

The analysers are available in five frequency models, starting at 300 kHz. Two or four ports are available for the 13.5 and 20GHz models, while two ports are available for the 8.5, 43.5 and 50GHz models.

The analysers feature increased measurement range (5 dBm more output power and 20 dB more dynamic range) and speed (the result of a new synthesiser with faster frequency switching). These also offer an improved user interface with a 24 per cent bigger display.

Breath analyser with printer

Subtronics India has introduced a three-status breath alcohol analyser with printer. The SIPL 5321 detects the presence of alcohol vapours in the subject's breath and gives an audio-visual indication if the reading goes above a preset level. The subject participates by blowing into the mouthpiece of the instrument.

The device has a bright graphics display. Other features include reading latching, non-volatile memory, password-protected critical menu settings, print readings with date and time, user-selectable multiple number of prints for evidential record documentation, and long battery life with charging indicator.

Digital multimeter

The Motwane Manufacturing Company has introduced a dual-display true-rms digital multimeter. The M65 comes with micro-ampere range and accuracy of 0.25

per cent. The multimeter can measure true-rms AC voltage and current, capacitance of up to 60 mF, and resistance. It can also perform diode and continuity tests.

Other features include a 6000-count LCD with white backlight, auto ranging, highly linear readings, selectable frequency and duty cycle measurement, and 60-position analogue bargraph for trend indication.

Infrared thermometers

Fluke Corporation has introduced the 62 Max and 62 Max+ infrared thermometers. These new test tools are easy to use and dust-, water- and drop-resistant. They can survive a 3-metre drop to wooden floors.

The 62 Max has a distance-to-spot ratio of 10:1 and measures temperatures from 30°C to 500°C with an accuracy of ± 1.5 per cent. The 62 Max+ has a distance-to-spot ratio of 12:1 and measures 30°C to 650°C with an accuracy of ± 1.0 per cent. Both IR thermometers operate on a single AA-size battery.

COMPONENTS

32-bit microcontroller

Nuvoton has launched the NuMicro Mini51 series 32-bit microcontroller. Powered by the ARM Cortex-M0 processor, the microcontroller runs up to 24 MHz (21.6 DMIPS). It features a 32-bit
