

New: RJK60S5DPK

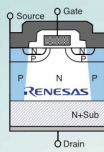

High-Voltage Power MOSFET with Super Junction Structure

First Device In New Line Of 600V Power MOSFETs Establishes Industry Benchmark For Low On-Resistance And Fast Switching Performance

The outstanding characteristics of the RJK60S5DPK power MOSFET make possible energy-saving power supply designs for TVs, solar panels, and many other products

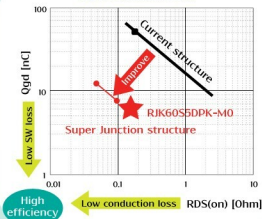

Current Structure

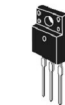

Super Junction Structure

- Super Junction structure using Deep Trench Technology
- 600V / 20A Industrial Leading $R_{DS(on)}$ and switching performance
- $R_{DS(on)} = 150\text{m}\Omega$, typ. (at $I_D = 10\text{A}$, $V_{GS} = 10\text{V}$)
- $163\Omega/\text{mm}^2$, 52% less than conventional devices
- Typical $Q_{gd} = 6\text{nC}$ (at $I_D = 10\text{A}$, $V_{GS} = 10\text{V}$) approximately 80% lower than conventional products
- Rapid switching speed allows building of smaller products that achieve greater power efficiency
- $Q_{gd} - R_{DS(on)}$ characteristic improvement by 90% compared to Planar structure devices
