

Innovative Current Sensor ICs with Integrated Conductors and Galvanic Isolation

Small Form Factor, High Bandwidth Hall-Effect Sensor IC Solutions

Allegro has developed a line of high bandwidth fully integrated Hall-effect current sensor ICs and Hall-effect linear ICs that provide highly accurate, low noise output voltage signals that are proportional to an applied AC or DC current.

Sensor configurations are available for sensing current in the range of 5 A to 200 A in the fully integrated packages and up to 2000 A using a linear Hall IC in a core configuration.

Advanced circuitry and packaging combine to provide improved performance that allow design engineers to easily integrate Hall-effect based current sensor ICs in applications where increased energy efficiency or new operating features are required.

Wherever current sensing is needed, an Allegro sensor IC can provide a solution.

5 to 40 A

50 to 200 A

>200 A

- Small form factor, low profile packages
- 100 $\mu\Omega$ and 1 m Ω internal conductor resistance
- 3 kVrms, 60 second voltage isolation
- >120 kHz analog output bandwidth
- 2 μ s FAULT output for IGBT protection
- Output error typically +/- 1%
- Electrostatic shield provides dV/dt immunity

- 1 mm thin KT package provides maximum coupling
- Highly programmable gain and 0 Amp offset
- Programmable gain temperature coefficient
- Programmable unipolar or bipolar output
- 120 kHz bandwidth

Key Applications

- Motor / pump / compressor control
- Inverters in alternative energy systems
- Hybrid electric vehicle power systems
- Power supply control
