

Teach Your Students Boundary Scan in a Smart Way

IEEE 1149.1 BOUNDARY SCAN TRAINER KIT

Features

This Training Kit provides Hands-On-Labs that cover relevant concepts of JTAG Boundary Scan Testing IEEE STD 1149.1. The following Labs are available:

Scan Test: Shows how to perform scan test on BS compatible devices, how to bypass devices from scan chain

Interconnect Test: Shows how to detect the interconnect between boundary scan devices, what various types of interconnects exist on a board and how various interconnect faults can be simulated and tested.

Functional Test: Shows how to perform functional testing for Non Boundary Scan Digital devices using JTAG technology.

Cluster Test : Shows how to test and trouble shoot a digital combinational logic using JTAG technology

Interactive Tutor: Give a detail in depth understanding of the JTAG technology and the IEEE1149.1 standard principal of testing.
