

Android-Based Media Player

Amkette's EvoTV is claimed to make your TV smarter than smart TV, giving one-click access to content and applications

The EvoTV is primarily a digital media device which allows users to surf the Web on their television just like they do on computers.

Claimed to be the first-of-its-kind television-oriented device, the Android-based EvoTV enables you to access content like videos, games and websites using Wi-Fi and broadband connection. It comes bundled with a remote control that acts like a mouse and has a microphone to enable conversations on VoIP (like Skype).

The device is powered by twin processors, ARM Cortex A9 and ARM Mali 400 graphics processor. The motion-sensing remote, called Evo Touch, adds the look and feel of a touchscreen. You can browse through specific views like Skype, YouTube and Tune-In one at a time. Also, you have one-click access to six different entities of applications or Web links. You can even create, edit, move and delete views.

Compact Digital SLR Camera

Nikon D3200 delivers 24.2-megapixel image quality and wirelessly connects to mobile devices

Nikon D3200 is a powerful DX-format digital SLR camera that comes in a portable, compact and light-weight body. It features a

24.2-megapixel CMOS sensor and Expeed 3 image-processing engine, to deliver high image quality and full HD video capabilities.

The enhanced Guide mode provides step-by-step assistance to the user while taking pictures. The D3200 supports collaboration with Android-based devices, with use of wireless mobile adaptor WU-1a.

Thanks to WU-1a, users can not only transfer images to smartphones (Android 2.3 series), tablets (Android 3.x series) and other smart devices but also remotely control shooting via a wireless connection.

 ₹ 48,950 (with AF-S 18-105mm VR kit lens)
 ₹ 37,950 (with AF-S 18-55mm VR kit lens)
 ₹ 32,250 (Body only)

Smartphone With 41MP Camera

The high-resolution camera of Nokia PureView 808 is inspired by satellite imaging

The Nokia PureView 808 is the first smartphone to feature a 41-megapixel sensor camera in India. It comes with Nokia PureView imaging technology and high-performance Carl Zeiss optics and runs the Symbian Belle operating system.

The smartphone sports a 10.2cm (4-inch) AMOLED multi-touch capacitive display and is powered by a 1.3GHz processor. It comes with an internal 16GB memory, which is expandable up to 48 GB with a microSD card. The PureView is also accompanied with a Nokia tripod mount HH-23 for better image capture.

Along with the still imaging,

the smartphone's camera allows full HD 1080p video recording with 4x lossless zoom. At 360p video recording, it offers 12x zoom. Nokia's sophisticated processing algorithms for pixel oversampling enable high-quality images.
