Y	-.-	Z	---.	0	-----	1	-----	2		3	
4		5		6		7		8		9	
.	...--	,	--...--	?	...--	'	...--	!	...--	/	...--
(	...--	)	--...--	&	...--	:	...--	;	...--	=	...--
+	...--	-	...--	_	...--	*	...--	\$	...--	@	...--

in addition to sensory disabilities (for example, people who are also deaf or blind) can receive Morse code through a skin buzzer.

Here is a program in JavaScript (MCE.htm) that can generate Morse code on your PC. Internet Explorer 6 or higher version of the browser is required for running the program.

Software program

When the program is run, two windows or frames open on the screen (refer Screenshot 1). The left frame is for entering the alphanumeric charac-

ters and the right frame displays the Morse code equivalent of the same (refer Screenshot 2).

The code is measured in words per minute (wpm), wherein a dot (.) is one unit long and a dash (-) three units long. Inter-elemental gap within a character is one unit long. Short gap between letters is three units long. Medium gap between words is seven units long.

Function description. The program uses only one function—AM()—for encoding of the characters. The AM() function consists of a predefined array

of all alphanumeric characters and their equivalent Morse code. When the program is run, it scans for the keyboard input and displays the equivalent Morse code in the display output window. To distinguish each encoded character, a pair of square parentheses '[']' is used.

EFY note. The source code of this project is available on www.efymag.com. ●

The author is a B.Tech in electronics and communications engineering who likes coding in JavaScript. He has a keen interest in space technology (satellite communication) and mobile communication
