

All About Embedded Systems

Embedded technology is gaining popularity nowadays. To learn more about embedded systems, you may refer to these websites

FreeRTOS.org

FreeRTOS is a market leading real-time operating system (RTOS) from Real Time Engineers. It supports 31 architectures and receives 77,500 downloads a year. It is professionally developed, strictly quality controlled, robust and free to embed in commercial products. It does not require you to expose your proprietary source code. It also has easy-to-use pre-configured projects and free forum support.

Free Electrons

Free Electrons is located in France and targets organisations and individuals throughout the world. It believes in the usefulness and strong potential of embedded Linux, free and Open Source software, and open standards in embedded systems and mobile devices. It offers online training in embedded Linux. The company is strongly committed to free software. So it has released all training materials under a free documentation licence on the website. The community section on the website has details on embedded hardware, how-to's and demonstrations.

Intel Embedded

The site has everything that one needs to learn about Intel's embedded offerings. It has a dedicated section containing videos, whitepapers and training on embedded systems. Many other resources available on the site are related to Intel embedded hardware and software. There is a link to Intel Embedded Community, where one can discuss different issues related to design and application.

EmbeddedRelated.com

EmbeddedRelated.com is a very popular resource for embedded systems engineers around the world, which has been around since 2005. The information on the site is very well organised into different categories. It has a blog, tutorial and a forum where you can access several active discussion groups related to embedded systems. It allows embedded systems engineers and researchers to exchange information and ideas.

ElectronicsWeekly.com

ElectronicsWeekly.com is one of the leading websites for electronics professionals, offering a daily diet of news, analysis, feature and business stories. The site also includes latest news related to embedded systems.
