

Vector network analysers

Scientific Mes-Technik has introduced fully-functional vector network analysers from Planar. These analysers find a wide range of network measurement applications from design and develop-

ment to installation and field service. These can be used for filter alignment, and testing of RF and microwave components and antennas.

PC-based analysers are available in three frequency bands, viz, 300 kHz to 1.3 GHz, 3.2 GHz and 8 GHz, with 1Hz frequency setting resolution and a dynamic range of up to 135 dB (typically 140 dB). These have built-in transmission and reflection test-set with full S-parameters. The user interface is Windows-based.

LIGHTING

High-intensity aviation light

Binay Opto Electronics has introduced a flashing-white, high-intensity, PowerLED aviation obstruction light. The HIA-DX-200KCD-W meets the International Civil Aviation Organisation (ICAO) and US Federal Aviation Administration (FAA) Type L-856 requirements for luminous intensity of 300,000 candela ± 25 per cent in flashing white mode of 20-60 flashes per minute.

The body and base are made with LM-6 aluminium-silicon alloy. The top cover acts as a heat-sink to enhance LED life and reliability. Compared to

conventional xenon-based lights, the HIA-DX-200KCD-W has a long life of 100,000 hours (to L50), thus enabling a minimum life of ten years. It can withstand a wide variation in the input voltage from 100V to 260V.

POWER SUPPLY

PSUs for professional gaming systems

OCZ Technology Group has announced the availability of Fatal1ty Professional Series power supply units (PSUs) that offer gamers stable and efficient power for their mainstream or high-end rigs. Available in 550W and 1000W models, these PSUs are backed with a five-year warranty.

The 1000W model sports a gaming-ready look with a sleek design, clean connectors and a glowing red LED fan. With a high build quality using 100 per cent Japanese capacitors and a powerful single +12V rail, it is capable of delivering 1000W of continuous power at 50°C—ideal for a demanding multi-GPU gaming rig.

COMPUTING

Industrial server

Kontron has introduced a new industrial silent server. The KISS 4U EATX provides the extremely high processor performance and energy

efficiency of two new 8-core Intel Xeon E5-2600 processors, each with up to 2.5GHz turbo clock frequency. It has an integrated motherboard for the Extended ATX (EATX) standard, with a total of 16 processor cores, 36 threads and up to 512 GB of DDR3 ECC RAM. The noise level is 35 dBA.

STORAGE

mSATA SSD

Transcend Information has launched an advanced mSATA solidstate drive (SSD). The MSA720 supports the SATA III 6Gbps standard and is built around a SandForce SF2281 controller. It delivers sequential transfer speeds of up to

560MB/s read and 530MB/s write, and 4k random file writes up to 91,000 IOPS. The MSA720 acts as a cache drive to accelerate operating system boot-up time and commonly-used application launch speed.

Only one-eighth the size of a standard 6.4cm (2.5-inch) SSD and weighing 7 gm, the MSA720 uses toggle-mode MLC NAND flash chips. It is available in 64GB and 128GB capacities, backed with a three-year limited warranty.
