## Mobile Intelligent Routing Framework

Moxa's MIRF (Mobile Intelligent Routing Framework) is a full-stack software framework that simplifies the coding of Multiple-WAN routing applications for wireless computers, speeding up application development processes and significantly shortening custom development times.

- Supports Multiple Heterogenous WANs and Inter-WAN Handoffs
- Guarantee Flexibility and Ease of Integration with MIRF: A Full Stack, Open MVC Architectural Framework
- Intelligent Policy Settings for Configuring WAN Preferences
- Friendly Web-based Configuration UI
