

Thick film lacquers of the series

ELPEGUARD®
PETERS

TWIN-CURE®
DSL 1600 E-FLZ

- excellent protection against corrosion
- fast UV curing and chemical crosslinking reaction in shadow areas
- solvent-free
- low viscosity adjustments
- excellent mechanical, chemical and climatic resistance

Conformal coating spray

Thank You for the Gift!

I had attended EFY Readers' Choice Awards at EFY Expo 2012, and I got a charger for AA- and AAA-size Ni-MH cells. Thanks for this very useful gift!

Since we are manufacturing cellphone batteries, chargers and accessories, we participated and exhibited our products in EFY Expo 2012. It's a great platform to show abilities and grab good business.

I have been an EFY reader since 1970s. I still remember the old days when I assembled electronics projects and circuit ideas published in EFY on a breadboard. I loved to read your articles on different topics, which were new for me those days.

In fact, EFY and its other publications are very useful for electronics enthusiasts, experimenters, engineers, electronic components traders and manufacturers. EFY provides easy solutions and help for all kinds of problems related to electronics. Every edition of EFY is precious.

Hope to see you many more times, to expose newer ideas, events and business.

Ashok K. Sapra
Technical Chief (R&D)
Callmate India

EFY: Thanks for your feedback! It made our day. We would like to get some interesting story ideas from readers, which our tech journalists can write on. Articles on topics suitable for EFY are also welcome from Callmate.

Back Issues of EFY

I am interested in some circuits published in July 2009 and March, June, August and December 2010 issues. These circuits are not available in 'Circuits Lab' section of www.electronicsforu.com website. Kindly provide me

From Facebook

Soldering

The article 'Your Guide To Soldering' by K. Bharathan published in May issue was very good and informative.

Prajyot

the link from where I can download these circuit diagrams.

EFY: You may visit www.efymagonline.com to purchase the respective issues.

Amplifier Using TDA2005M

In the 'Guitar and Microphone Amplifier Using TDA2005M' circuit published in May issue, please note that:

1. Depending on the intended application of the circuit

(a) The value of C3 can be reduced and selected in the range of 1-10 nF. This will reduce suppression of high frequencies from the microphone.

(b) If electrolytic capacitors C2, C4 and C5 have high leakage currents, these can be replaced with non-polarised capacitors of the same values.

(c) The value of potentiometer VR1 (2.5-kilo-ohm) can be reduced to 100-680 ohms.

2. If switch S1 is opened, the microphone is not powered.

3. If the guitar does not have an internal preamplifier or buffer, the cable between the guitar and connector CON1 should not be more than 1.8 metres long.

CAREERS:

The article 'Empower Yourself With Power Electronics' by Sudeshna Das is very informative for freshers as well as those who want a hike in their salary. Thanks a lot for this valuable information!

Chetna Singh

☐ A good article on power electronics. EFY has been my favourite magazine since my college days and I like the technical information covered in it.

Hithu Anand

☐ Thanks for this article! I would like to work in the power electronics industry.

Mohan Raj C.
