

Looking for **EMBEDDED, VLSI & DSP** training solutions for your **BE, ME/ M.TECH.** laboratory?

**Offering a comprehensive solution for Embedded, VLSI and DSP training program/laboratory,
allowing user to perform basic to advance experimentation.**

Covering range of microcontrollers such as 8051, PIC and ARM along with design tools, user has a one stop solution to their complete embedded needs. RTOS such as RT Linux and Win CE platforms allow user to explore high performance embedded solutions. Complete hardware and software solutions from basic 8051 microcontroller to ARM 9 including RTOS porting.

Large scale flexibility in the hardware and software design is presented by introduction to SoC building on FPGA platform with ARM Cortex core. User can create exact combination of peripherals and Integrated Proprietary (IP) to meet their application requirement.

Signal processing solution across TI- DSP along with variety of application examples is an ideal solution for beginners and as a reference to the advance users. The floating and fixed point DSP is offered along with most-advanced DSP 'C' compiler and assembly optimizer to maximize efficiency and performance.

EMBEDDED LAB

VLSI LAB

DSP LAB

Our Other Range Of Products

Basic Electronics

Embedded And DSP Trainers

Microprocessors/Microcontrollers

VLSI

Controls And Instrumentation

Digital Communication

Network And Telephony

Wireless Communication/Antenna/Radar

RF And Microwave

Analog Communication

Fiber Optic

PCB Lab

Test And Measuring Instruments

Optomechanics

Dealers active in Engineering colleges, Polytechnics, ITI's and other Technical Institutions, willing to work with us may write to - director@falconindia.biz
